

Kevin Samson

+971 56 7269454 | k3vinsamson@gmail.com | projects-by-kevin.vercel.app | github.com/kevin-samson | linkedin.com/in/kevin-samson-

Full-stack developer with hands-on experience in AI-driven automation and blockchain technology. Built systems including an AI-powered financial data analyzer and a blockchain-based certificate verification platform. Proficient in Python, C#, and modern web frameworks. Looking to contribute to innovative projects in AI and decentralized systems.

Work Experience

Smart Software Solutions, Software Engineering Intern | Abu Dhabi, UAE

Aug 2024 - July 2025

- Implemented a real-time notification system with popup banners and click-through navigation, reducing response time to updates.
- Developed a color-coded calendar component for the dashboard displaying employee status indicators (absent, present, un-marked attendance)
- Designed and deployed a media announcement section on the user dashboard, enabling organizational communication through images and notices upon login.
- Built dashboards for Inventory and Purchase Order modules, implementing creation and approval workflows that improved procurement tracking and management control.
- Developed RESTful APIs using ASP.NET, C#, and the .NET Framework to support HRM mobile application's features and integrations.
- Improved user experience by building intuitive front-end navigation from scratch
- Performed data cleaning, transformation, and migration of client datasets using SQL, ensuring data integrity during system onboarding processes.
- Collaborated in an Agile development environment using Git for version control

ADNOC Group, Student Intern | Abu Dhabi, UAE

Jun 2023 - Jul 2023

- Developed dashboards using Power BI as per the requirements
- Learnt about agile software development and how ADNOC develops software for the company

Projects

Bank Statement Analyzer

May 2025

Personal Project

- Developed a data extraction and analysis tool to automate the processing of bank statements.
- Utilized GMFT, a Python-based AI toolkit, for deep table extraction to accurately parse financial data from PDF statements into a clean CSV format.
- Implemented a categorization algorithm to automatically classify transactions, providing valuable insights into spending habits.
- Implemented a user interface using Streamlit to provide a dashboard for users to upload statements

Predictive Analysis of Vehicle Fuel Consumption

April 2025

University Project

- Designed and implemented a predictive model for vehicle fuel consumption and emissions using a multi-layer perceptron (MLP) Neural Network architecture.
- Utilized **Python** and TensorFlow/Keras to build and train a pyramidal network (128-64-32 neurons) for continuous regression prediction.

Blockchain-Based Certificate Verification System

May 2024

University Group Project

- Developed a secure, tamper-proof system for issuing and verifying academic certificates using Blockchain technology.
- Implemented a Solidity smart contract on the Ethereum blockchain to store document hashes and digital signatures for verification.
- Created a Python script using the Pillow library to generate certificates, calculate their hash, digitally sign them, and embed a QR code for easy verification.
- Designed the system to allow verification on any platform via camera/QR code scan or by uploading the soft copy of the document.

Portfolio Website

March 2024

Personal Project

- Built a responsive portfolio website using Nextra (Next.js framework) with server-side rendering, SEO optimization, and integrated analytics for tracking visitor engagement.
- Implemented dynamic dark mode theming and a Markdown-based content management system for seamless project documentation updates.
- Configured automated CI/CD pipeline on Vercel with GitHub integration for continuous deployment on code commits.

Technical Skills

Programming Languages	Python, C# (.NET), Java, C/C++, JavaScript, TypeScript
Web Development	React, NextJS, Tailwind CSS, Flask, Node.js, ASP.NET
Databases	MySQL, SQL Server, MongoDB, Firebase
AI & Machine Learning	Neural Networks, GMFT (AI Toolkit), Categorization Algorithms, Data Analysis, YOLO, OpenCV
Blockchain & Web3	Ethereum(Solidity), Solana(Anchor)
Tools & DevOps	Git, Docker, Linux, Postman API, CI/CD (Vercel), Visual Studio, Wireshark
Cloud Platforms	Amazon Web Services (AWS), Azure, Google Cloud
Data/Hardware	Scrapy, Selenium, Arduino, Raspberry Pi
Soft Skills	Agile Collaboration (GitHub), Problem-Solving, Technical Communication

Education

BE in Computer Science	Birla Institute of Technology Dubai, UAE	2021-25
High School	Bright Riders School Abu Dhabi, UAE	2015-20

Certifications

2021	Introduction to IoT,	Cisco
2023	Postman API Fundamentals Student Expert Certification,	BITS Pilani
2024	8-week Career Readiness Program for Cloud Computing (Microsoft Azure), Tecoholic	BITS Pilani
